

# DESMI Supply to Data Centre in Amsterdam

TelecityGroup is Europe's leading provider of premium carrier-neutral data centres, operating facilities in city locations across Europe

DESMI have supplied six NSL250-330 pumps for cooling a data centre for the plant AMS 2 with Telecity in Amsterdam.

Interxion's Amsterdam carrier- and cloud-neutral data centres provide highly secure, scalable infrastructure for mission-critical IT systems, with a wide range of connectivity solutions.

CASE STORY

The campus supports the latest high-density power configurations and has been designed using energy-efficient modular architecture.

The entire facility infrastructure is monitored 24/7 (chillers, CRACs, fire panels, generators, UPS, etc.) and built with use of sustainable energy such as free cooling, ground water cooling and waste heat re-use, but never at the expense of reliability and availability.

The Amsterdam data centres use 100% certified green power from biomass, wind and

water. The facility environment is continuously monitored to constantly improve efficiency.

The facility mentioned consists of 746 m<sup>2</sup> of data servers. The DESMI pumps have been installed in 2007 without any downtime and running continuously since then, as per the client (April 2014).
