OIL ABSORBENT - Melt-blown polypropylene oil only absorbents

PROVEN OIL SPILL TECHNOLOGY
OIL ABSORBENT - Melt-blown polypropylene oil only absorbents

DESMI is an approved distributor for a number of well-known and quality manufacturers of oil absorbent materials.

Melt-blown polypropylene has the ability to absorb a wide range of oils at up to 25 times its’ own weight. At the same time this material does not absorb water – it can therefore be used to soak up oil on the ground or floating on water.

This material is available shaped into a variety of configurations to suit a wide variety of applications. Mats (pads) are generally used individually on the ground or on confined water. Absorbent booms are available in a variety of diameters and lengths. They are all supplied with an internal rope with a joining mechanism (clip or ties) so that they may be joined together and applied to waterways and rivers.

Cushions are handy for oil recovery from drains. These absorbents may be disposed of by incineration or other means. For recovery of heavy and viscous oils we recommend SORBAIDE ‘pom poms’.

We can also supply biodegradable wood fibre or peat based absorbents.

Advantages of the OIL ABSORBENT:
• A wide range of oil only absorbent materials
• Pads, rolls, booms, cushions, socks and sweeps
• High recovery efficiency
• Strong outer casings
• Competitive solutions
• Quick delivery from several international locations

We have a wide selection of booms, pads, rolls, mini-booms, sweeps and socks. Please contact us for full information.
